Meeting Attendance Log						
Meeting Date	Agenda	Facilitator	Attendees	Key Discussion Points	Next Steps	
25/9/2026	Review the REST API assignment requirements, understand the modified_sms_v2.xml dataset, identify the main technical components, and divide the project responsibilities among the team members.	BATSINDA Benoit	BATSINDE Ange Liana, BATSINDA Benoit, NSHIMIYIMANA Abdurahim, MUCYO Joel	The team reviewed the requirements for XML parsing, REST API CRUD operations, Basic Authentication, DSA implementation, and API testing. The team discussed how the XML transaction records would be converted into JSON-compatible Python dictionaries and then made available through the API. The required endpoints, authentication requirements, linear search and dictionary lookup, and testing requirements were also reviewed.	Each team member would begin working on their assigned technical component and commit their work to the GitHub repository. The team would later integrate the individual components and test the complete API.	

28/9/2026	Review the progress of the technical implementation, discuss integration between the components, identify any issues, and prepare for testing and final submission.	BATSINDE Ange Liana	BATSINDE Ange Liana, BATSINDA Benoit, NSHIMIYIMANA Abdurahim, MUCYO Joel	The team reviewed the progress of the XML parsing, CRUD API, authentication, and DSA components. The team discussed whether the parsed transaction data was being correctly used by the API, whether authentication was returning 401 Unauthorized for invalid requests, and whether the two search methods could be compared using at least 20 records. The team also reviewed the required curl/Postman tests and the evidence needed for the final submission.	The team would complete the remaining technical work, integrate the components, perform the required tests, collect evidence, and verify that the GitHub repository and participation sheet contained the required contributions.
